To Whom it May Concern

In 1998 and 1999 R.T.D. Enterprises worked as a subcontractor to Oakdale Construction Co., who was contracted by the Pittsburgh Water and Sewer Authority of Pittsburgh, Pennsylvania to install/construct a 45 mil polypropylene liner and floating cover on a 125 million gallon potable water storage reservoir with a surface area of approximately 17 acres. The reservoir was constructed of sandstone blockstone and concrete.

R.T.D. managed the construction of the above reservoir liner and cover project very efficiently and on schedule. They demonstrated much expertise in the work performed, and they handled all in-office business and onsite work very professionally. James Vicheire played an instrumental roll in coordinating and completing the installation work on site. There have been no failures or problems that have occurred with the installation since project completion.

Based on experience working with RTD Enterprises on the above project and a previous reservoir liner/cover project, as the construction inspection coordinator, I would recommend them as a very competent contractor in this line of work.

If you desire additional information on RDT Enterprises, please feel free to contact this office.

Very truly yours,
